

# The Revolutionary New All-Source Music Replay & Control Solution

## PRESS RELEASE

**dPlay – DAPreamplifier**

**dStream – Streamer/Server and System Enhancer**

**dVin – Phono-stage and A to D Converter**

- **State-of-the-art digital technology and performance at real world prices** – the MiZiK system offers genuine high-end performance, but at a price level and in a presentation that is credible to the new generation of digitally convergent customers.
- **Modular System Architecture** – allows you to have only those facilities you need and to grow your system over time.
- **Unique MusiC™ Process Technology** – revolutionary error cancellation system based on sophisticated algorithms and non-linear modelling techniques, embedded in a digital feed-forward topology. Ground breaking performance with astonishingly natural and accurate sound from both digital and analogue replay.
- **Complete All-Source Solution** – offers interface, switching and control of all types of digital and analogue source material.
- **Individual units will interface with existing systems.**
- **Compact, Elegant Design** – from industrial designers Ochoa y Diaz-Llanos, steps away from bulky, old-school rack-mount aesthetics. Integral stands allow the units to be placed horizontally or vertically.
- **HDMI-based MiZiK link facilitates system interconnectivity.**
- **Touch-screen interface or MiZiK iPad App control.**

## What is MiZiK?

### The MiZiK System

MiZiK doesn't just look different, it really is different, heralding a whole new generation of audio components – components that take the high-fidelity concept seriously. It challenges conventional technology and functionality just as strongly as it challenges the governing audio aesthetic. With its solid monocoque construction and compact dimensions MiZiK recognises the mechanical imperatives of superior audio performance just as clearly as it rejects the domestic incongruity of 19" rack-mount casework. It actively embraces new source solutions and new technological opportunities, creating a system response for a whole generation of digitally convergent consumers who just don't "get" high-end audio – as well as all those audiophiles who can see which way the wind is blowing.

The MiZiK components allocate their various functions with a completely new logic, one that is dictated by both the unique technology they employ and also changes in the world of music replay. The emergence of file storage systems has changed the digital landscape dramatically, throwing a new focus on both D to A and A to D technology. The MiZiK system's division of labour means that it's various functions can easily be combined (via the HDMI-based MiZiK Link) to create a single, universal switching/control solution. This could be added to an existing high-end system or used as the basis for a starter system, built one box at a time and growing in performance and capability. But that's only part of the story. In many ways the true versatility of MiZiK lies in the way it can be incorporated, step-by-step, into conventional systems, easing transition from the analogue focussed

systems of the past to the file-replay solutions of the future.

This uniquely versatile package offers the user the choice of single, dual or triple box set-ups as required – each solution being independently viable. Any of the units is a high-performance product in its own right, quite capable of enhancing the capabilities of even the best systems. But combining the **dStream** with either the **dVin phono-stage** or the **dPlay DAPre** (or both) offers a further significant lift in performance, applying the MusiC Process technology to their already exceptional musical abilities. The result is astonishingly powerful, both in a technological and musical sense, offering musical performance that was previously impossible to achieve at this price level.

**Weight** of one MiZiK Module: 5.5kg

**Dimensions** in horizontal mode (w x d x h): 29 x 22.3 x 8.1cm

**Retail pricing of each MiZiK module is: €1995 including Sales Tax**
